Logo Uploads

For engraved products, acceptable file formats: .eps, .ai, .psd, .pdf only. For other products, acceptable file formats: .jpg, .gif, .tif, .tiff, .eps, .ai, .bmp, .psd, .pdf and other common image formats only.

For engraved products, please have all of your logos, fonts, and graphics as shapes or paths (vector format).

Please outline your fonts if sending .eps or .ai files. Also, please convert your text layers to shapes for PSD files. This can be done by right clicking on the text layers in the layers palette and selecting "convert to shape." No watermarks on your images.

If flattened or rastered artwork is used, hi-res files are preferred. Please do not send all-white flattened images. If images are flattened we cannot extract paths or line art, there must be black or color information.

For engraved products, all black and color information is engraved in white, please keep this in mind for artwork featuring knockouts.

.eps and .ai file formats are preferred because usually they are "vector art" which means they can be scaled up or down with no resolution losses. Vector art is typically shapes and type in a single color format such as a logo. Images with gradients and photographs are not vector art. Vector art is preferred for all engraving customizations whereas non-vector art is ok for full color printing applications.

Definitions

*Laser Engraving* is the act of stripping the anodized coating to reveal the metal underneath. The logo, clipart or other artwork will show up in a whiteish/metallic tint. Color information will be engraved whitish, white information inside the file is disregarded.

*Full color printing* is the act of 4 color printing and the logo will appear in color if color information is inside the file.

**WE CAN HELP!**

If you need any help along the way, Technicare staff will be happy to walk you through the ordering process. Just call 1-800-897-1844

Shipping Policy

**Ship Ground** - Standard shipment \$9.95 CAD.
